Better processes - Better business management

An integrated, cost effective business solution for Water Authorities built on the Microsoft.Net framework

Jan 2011

The Company – Information Outlook

Information Outlook is committed to delivering to Water Authorities an innovative Microsoft Dynamics based corporate business solution that covers a range of integrated financial Water Authority applications on the Microsoft.NET platform.

Our recommendation will provide authorities with the most up-to-date applications and Microsoft technology, enabling organisations to pursue a future integrated information, communications and technology (ICT) strategy that will continually grow with the business. Our solution is based on the global enterprise Microsoft Dynamics NAV financials and our locally developed Resource™ Water Authority add-on functionality, providing users with a complete, end-to-end integrated business model.

Microsoft Dynamics NAV is a modern, global business management enterprise resource planning (ERP) finance system used around the world in a variety of private companies and levels of government organizations. There is a healthy Dynamics community in Australia and Information Outlook is developing and supporting this product for the Water Authority sector.

Our significant investment in developing this business system specifically for Water Authority use has enabled us to bring competitiveness and innovative products to this sector, on a Microsoft-aligned business model.

Capability and Experience

Information Outlook is a mature and experienced software and systems development, deployment and support organization. The company is established within Local Government and Government Agencies in NSW, WA and Tasmania.

A Microsoft Certified Partner, Information Outlook have installed solutions to mid range and tier one corporate businesses throughout Australia ranging from 5 users to 250 users.

In 2005, the company was awarded federal funding to create and deliver innovation to the Local Government sector by writing a new land information system comprising property, rates, water billing, animal control and regulatory applications for Local Government. The land information and regulatory applications have been adapted for use in Water Authorities.

Following several years of development, the new system was successfully implemented into sites in Tasmania from 1st July 2009, one site being major water corporation, Southern Water. Our software is currently used to manage land information and regulatory applications for 125,000 properties in the Southern Region of Tasmania. Ongoing developments are made constantly to meet the business requirements of Water Authorities and Local Government
